github.com/Montasir00 | Portfolio: fazlurrahman.vercel.app

PROFESSIONAL SUMMARY

Final-year BSc Data Analysis student at the University of Messina with hands-on experience in machine learning, statistical modelling, and full-stack development. Completed two internships — including research on air quality prediction using 7 years of meteorological data — and maintain 13+ public projects on GitHub.

KEY SKILLS

Languages & Core:	Python (Pandas, NumPy, scikit-learn, SHAP), SQL
Machine Learning:	Machine Learning (Supervised Models, Evaluation)
Data Analysis:	Data Analysis (EDA, Feature Engineering, Cleaning)
Data Visualization:	Data Visualization (Matplotlib)

WORK EXPERIENCE

Research Intern — Data Science
Jun 2025 – Jul 2025

University of Messina, Italy

- Developed O3 air quality prediction models (R^2=0.53, 73% variance explained) by analysing 20,000+ meteorological observations across 7 years.
- Engineered automated Python pipelines to acquire and parse large-scale datasets via the Copernicus Climate API.
- Conducted statistical correlation analysis on COVID-19 lockdown periods, quantifying the paradoxical drop in primary pollutant levels.

Web Developer Intern
Oct 2025 – Dec 2025

Circular Protocol

- Architected a decentralised NFT platform (GeNFT) with IPFS-based asset storage, Ethereum wallet integration, and end-to-end transaction handling via PHP and Web3.php.
- Designed and deployed OTP-based multi-factor authentication and minted 15+ NFTs verified on a live testnet environment.
- Delivered a fully functional platform covering asset upload, wallet connectivity, and secure user authentication from scratch.

EDUCATION & TRAINING

BSc in Data Analysis
Sep 2022 – Jul 2026

University of Messina, Italy

Messina, Italy
Grade: In progress
Relevant courses: Machine Learning, Data Mining, Statistics, Databases
Thesis: Deepfake Audio Detection (in progress)

Higher Secondary Certificate (HSC)
Jun 2018 – Mar 2020

CDA Public School & College, Bangladesh

Chittagong, Bangladesh

PROJECTS

Student Dropout Prediction
github.com/Montasir00/Student-Dropout-Prediction

Binary Classification Pipeline

Tech: Python, scikit-learn, Pandas, SHAP

- Built a binary classification pipeline using Random Forest and Gradient Boosting on structured educational data, achieving 85%+ cross-validated accuracy.
- Applied end-to-end preprocessing and EDA — including missing value imputation and class balancing — to improve model robustness.

• Used SHAP to identify engagement level as the strongest dropout predictor (avg impact: 0.65), producing interpretable outputs suitable for institutional reporting.

Bloom & Basket E-Commerce
github.com/Montasir00/Bloom-And-Basket

Full-Stack Grocery Platform

Tech: PHP, MySQL, Docker, Apache, JavaScript

- Developed a full-stack e-commerce platform with a normalised MySQL schema covering products, orders, users, and a 5-stage order lifecycle (pending → delivered).
- Containerised the full stack (PHP, MySQL, Apache) using Docker Compose with a 3-service architecture, enabling one-command setup from any environment.
- Implemented secure authentication using bcrypt hashing, CSRF protection, and prepared statements.
- Applied OWASP best practices to prevent XSS and injection vulnerabilities.

Blockchain Transaction System
github.com/Montasir00/Blockchain-Transaction-System

Multi-Chain Trading Platform

Tech: PHP, Web3.php, Ethereum (Ganache), Binance API, MySQL

- Built a blockchain-based platform supporting live ETH transactions (via Ganache), Bitcoin (via Binance API), and simulated USD — across 3 wallet types in a unified interface.
- Implemented real-time wallet balance synchronisation and OTP-based authentication.

• Executed 50+ peer-to-peer testnet transactions with zero failed signatures.

LANGUAGES

Bengali — Native

English — C1

Hindi — C2

Italian — A2 (actively studying towards B1)
